Mike Sanders, Founder & CEO

PROJECT OVERVIEW

This project will analyze and optimize ACME Manufacturing's warehouse operations to reduce material handling time by 40% and improve inventory accuracy to 99.5%. The engagement will deliver a comprehensive implementation roadmap with measurable ROI targets and ongoing support to ensure sustained improvements.

SCOPE OF WORK

Discovery & Analysis

Conduct comprehensive assessment of current warehouse operations, identify bottlenecks, and establish baseline metrics for improvement tracking.

- ✓ Current state process mapping and time studies
- ✓ Bottleneck analysis and root cause identification
- ✓ Baseline metrics dashboard for tracking improvements
- ✓ Stakeholder interviews and requirements gathering

Solution Design

Design optimized warehouse layout, material flow processes, and technology integration strategy tailored to ACME's specific operational needs.

- ✓ Optimized warehouse layout design with CAD drawings
- ✓ New material flow process documentation

- ✓ Technology integration recommendations
- ✓ ROI analysis and business case documentation

Implementation Support

Provide hands-on support during implementation phase, including training, process validation, and performance monitoring to ensure successful adoption.

- ✓ On-site implementation support and training
- ✓ Process validation and quality assurance
- ✓ Performance monitoring dashboard setup
- ✓ 30-day post-implementation support

Total Project Investment **$12500.00**

All travel and related expenses are included in the pricing above.
